The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequence (ABL16175) and the encoded proteins (ABBS-137-ABB-2072). The sequence data for this parent did not form part of printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                         New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ----AAATTTAAGG

```
The present invention describes an expressed sequence tag (BST), where the EST is an isolated, enriched, or purified nucleic acid sequence representing all or part of a gene, the expression of which, or its complementary sequence, in a cell identifies the cell as a developmentally competent or incompetent cell. Molecules which induce developmental competence in a cell line are useful for inducing tritipotence in one or more cells. Molecules which induce developmental incompetence in a cell line are useful for preventing a full term pregnancy in an animal and inhibiting totipotence. The molecules are also useful for treating a disease in an animal by inducing development of one or more cells of the animal into a specific cell type. The present sequence represents a bovine EST which is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         197
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        89 AlaGluProGluAspAlaGluLysSerArgThrTyrValAlaArgAsnGlyGluProGlu 108
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      78 GCTGGAGCCCTCCGTGATGTCTCTGAGGAGTTGAGCCGCCAGCTGGAAGACATCCTCAGT 137

New polynucleotide sequences obtained from various cDNA libraries, useful as hybridization probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA.

Claim 1; SEQ ID NO 18899; 44pp; English.

The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for identifying expressed genes or for physical mapping of the human genome, in forensios, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is one of the 38043 isolated cDNA/EST sequences. Note: The present sequence for this patent did not form part of the printed specification, but was constant and directly from 19770 at obtained in electronic format directly from USPTO at segdata.uspto.gov/sequence.html?DocID=20030073623

The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence of polynucleotide which comprises a 1'-end sequence of pecification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length or primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs represent human amino acid sequences; and AAH1363 represent human amino acid sequences; and AAH362 represent control of the primers are used in the exemplification of the primers are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    present invention

New cardiovascular system related polynucleotides and polypeptides, useful for diagnosing, treating and/or preventing disorders of the cardiovascular system

Claim 1; SEQ ID NO 467; 674pp; English

cardiovascular system antigen polypeptides of the invention.

cardiovascular system antigens and their associated polynuclectides are
cardiovascular system antigens and their associated polynuclectides are
cardiovascular system antigens and their associated polynuclectides are
cuseful in the diagnosis, treatment and prevention of various types of
disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs,
chickens or sheep. A pathological condition can be determined by
chickens or sheep. A pathological condition and a cardiovascular
system antigen polynuclectide. The treatable disorders include autoimmune
diseases such as rheumatoid arthritis, hyperproliferative disorders such
as neoplasms of the breast or liver, cardiovascular disorders such as
cardiac arrest, cerebrovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, and disorders such as Alzheimer's disease, infections caused
by bacteria, viruses and fungi, ocular disorders such as corneal
infection, endocrine disorders such as formed and infection,
das glomerulonophritis and respiratory disorders such as asthma and
pleurisy. The polypeptides can also be used to aid wound healing, to
prevent skin aging due to sumburn, to maintain organs before
transplantarion, to regenerate tissues and in chemctaxis. Note: The
specification, but was obtained in electronic format directly from WIPO
specification, but was obtained in electronic format directly from WIPO ftp.wipo.int/pub/published_pct_sequences

The invention relates to human cardiovascular system related polypeptides and the polymucleotides encoding them. The polypeptides, polymucleotides and antibodies to the polypeptides are useful for diagnosing a pathological condition or a susceptibility to a pathological condition, for preventing, treating, or ameliorating a medical condition, such as cancer of cardiovascular system tissues, proliferative disorders, foetal and developmental abnormalities, heematopoietic disorders, diseases of arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease, Parkinson's disease), cognitive disorders, schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New cardiovascular system related polynucleotides and polypeptides, useful for preventing, treating, or ameliorating a medical condition, such as cancer of cardiovascular tissues and cancer metastases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; SEQ ID NO 467; 262pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             254
diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, kidney disorders, gastrointestinal disorders, pregnancy-related disorders, endocrine disorders and infections. The nucleic acids are also useful for chromosome identification, radiation hybrid mapping or long-range restriction mapping. The polypeptides and polynucleotides may also be used as food additives or preservatives to increase or decrease storage capabilities, fat content or other nutritional components. This sequence represents a human cardiovascular system related polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     96

The invention relates to 2175 novel. human ovarian antigens (ABB41054-ABB9328) and to CDMAs encoding them (ABG54131-ABG56305), and also encompasses polypeptides 90% identical and polyputcleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen of covarian antigen polymoleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast-related of sorders. Such conditions include ovarian cancer and breast cancer, and clisorders. Gut conditions include ovarian cancer and breast cancer, and clisorders (e.g., infertility, disorders of pregnancy, anovulation, disorders (e.g., infertility, disorders of pregnancy, anovulation, clinquamators, infertility, disorders of pregnancy, anovulation, disorders, infertility, disorders of pregnancy, anovulation, clinquamators, infertility, disorders of pregnancy, anovulation, clinquamators, componitions (e.g., mastitis, oophoritis and disorders, infertilismancy conditions (e.g., mastitis, oophoritis and vagnifically), inmune disorders (e.g., congenital and acquired inmunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus), blood-related disorders (e.g., anaminal, cardiovascular disorders of crepiratory disorders, neurological disorders gastrointestinal disorders may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may be used as food additives or to prepare antibodies clearing in dispersent school polypeptides may be used as food additives or to prepare antibodies clearing in disperse the prainted spanet cepares data for this patent did not form part of the printed spanetic day and the number of the printed spanetic day and the prepare antibodies invention. The present invention describes an expressed sequence tag (EST), where the EST is an isolated, enriched, or purified nucleic acid sequence representing all or part of a gene, the expression of which, or its complementary sequence, in a cell identifies the cell as a developmentally competent or incompetent cell. Molecules which induce totipotence in one or more cells. Molecules which induced totipotence in a cell line are useful for inducing incompetence in a cell line are useful for preventing a full term pregnancy in an animal and inhibiting totipotence. The molecules are also useful for treating a disease in an animal by inducing development of one or more cells of the animal into a specific cell type. The present sequence represents a bovine EST which is given in the exemplification of

The method comprises determining the expression of a set of human genes or expression products in an endometrial sample suspected of being cancerous. The human genes of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        152
the invention are differentially expressed in breast tumours characterised as high or low MAI (mitotic activity index). These sets of genes can be used to discriminate between high and low MAI breast tumours. The invention also provides DNA and protein microarrays for analysing the expression of the human genes and their protein products. The methods and arrays are useful for the diagnosis and prognosis of indentification of compounds useful for the treatment regimes, and identification of compounds useful for the treatment of endometrial cancer. ABKAS5S1-ABKASS81 represent the human genes of the invention that are differentially expressed in breast cancer tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     132

given in ABR92047 to ABR92164. A higher level of expression of (I) than

normal indicates the presence of cervical cancer. Also described: (I) a

vector (II) containing (I); (2) a host cell (III) containing (I); and (3)

assessing (MI) whether a patient is afflicted with cervical cancer.

comprising comparing the level of expression of a marker in a patient's

sample, and the normal level of expression of the marker in a control non

cervical cancer sample, where a significant increase in the level of

expression of the marker in the patient's sample relative to that in the

control sample is an indication that the patient is afflicted with

cervical cancer. (I) has cytostatic activity, and can be used in gene

therapy and in vaccines. (I) is useful in detecting, characterising,

preventing and treating human cervical cancers. (I) may also be used in

various prognostic and diagnostic assays, pharmacogenomics and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GCTCCAGGACACCCAGGAGCTGCTTCAAGAAGAAACCCGGCAGAAGCTCAA---CGTGTC 4092

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        3 SerProGlyGlnProGluAla------GlyProGluGlyAlaGluArgPro 18
                                                                                                                                                                                     The invention relates to a combination comprising cDNAs or their complements that are differentially expressed in respiratory disorder. The combination is useful for preparing a composition for disponsing or treating respiratory disorders e.g. lung cancer, chronic obstructive pulmonary disease, emphysema or asthma. The present sequence represents human cDNA differentially expressed during lung cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9583 CCAGCTGGACGAGGAGATGGAGGCCAAGCAGAACCTGGAGCGCCACATCTCCACTCTCAA
New combination comprising cDNAs that are differentially expressed in respiratory disorders, useful for diagnosing or treating respiratory disorders e.g., lung cancer, chronic obstructive pulmonary disease, emphysema or asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              19 SerGlnAlaAlaProAlaValGluAlaGluGlyProGlySerSerGlnAlaProArgLys

XX	Determining whether a patient will transferase inhibitor, by analyzin differentially modulated in the pr	Disclosure; SEQ ID NO 279; 346pp; English. The invention relates to a method of determining whether a patient wirespond to treatment with a farnesyl transferase inhibitor (FTI), by	analyzing the expression of gene that is differentially modulated in the presence of an FTI. The method is useful for determining whether a patient will respond to treatment with a FTI such as (B)-6-[amino(4-chlorophenyl) (1-methyl-1H-imidazol-5-yl)methyl]-4-(3-chlorophenyl)-1-	CC methyl-2-(H)quinolinone, monitoring the therapy of a patient, treating a CC patient with leukemia with FII if the analysis indicates that the patient CC will respond. This sequence corresponds to a gene whose expression may be CC modulated in the presence of FII. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                 SUMMARIES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        HSM807779

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. The cord of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Center clone name: 239_013
Sequencing vector: Plasmid; nd; 100% of reads
Sequencing vector: Plasmid; nd; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 180713 bases at least Q30
Consensus quality: 1808040 bases at least Q30
Consensus quality: 181059 bases at least Q20
Insert size: 172000; agarose-fp
Insert size: 181147; sum-of-contigs
Quality coverage: 8.0 in Q20 bases; sum-of-contigs

* NOTE: This is a 'working draft' sequence. It currently consists of 13 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     437
                                                                                                                                                                                                                                 Neuherberg, GERMANY
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de;
sequenced by BMFZ (Biomedical Research Center at the
Heinrich-Heine-University, Duesseldorf/Germany) within the cDNA
sequencing consortium of the German Genome Project. This clone
(DKFZP451R216) is available at the RZPD in Berlin. Please contact
